	Page		Page		Page
Preliminary note	4				
I. Intergeneration equity		II. Quality of live		III. Social cohesion	
Resource protection		Economic prosperity		Employment	
1a Energy productivity.....	5	10 Gross domestic product per capita.....	27	16a, b Employment rate	46
1b Raw material productivity.....	7	Mobility		Perspectives for families	
Climate protection		11a Intensity of goods transport.....	29	17a, b All-day care provision for children	48
2 Greenhouse gas emissions.....	9	11b Intensity of passengers transport.....	31	Equal oppurtunities	
Renewable energies		11c, d Share of rail transport and inland water transport in goods transport performance	33	18 Gender pay gap	50
3a, b Share of renewable energy sources in total energy consumption.....	11	Farming		Integration	
Land use		12a Nitrogen surplus	34	19 Foreign school leavers with a school leaving certificate	51
4 Increase in land use for housing and transport.....	12	12b Organic farming	36		
Species diversity		Air quality			
5 Species diversity and landscape quality.....	14	13 Air pollution	38		
National dept		Health and nutrition		IV. International responsibility	
6 National deficit.....	15	14a, b Premature mortality	39	Development cooperation	
Provision for future economic stability		14c, d Proportion of adolescents and adults who smoke	41	20 share of expenditures for official development assistance in gross national income	53
7 Gross fixed capital formation in relation to GDP.....	17	14e Proportion of obese people	43	Opening markets	
Innovation		Crime		21 German imports from developing countries	55
8 Private and public spending on research and development.....	19	15 Burglaries in home	45		
Education and training				List of abbreviations / explanation of symbols	57
9a 18- to 24-year-olds without a school leaving certificate.....	21				
9b 25-year-old university graduates.....	23				
9c Share of students starting a degree course.....	25				

Preliminary note

This publication "Data to the Indicator Report 2010" is a supplement to the Indicator Report 2010 on sustainable development in Germany. It provides not only the annual series pertaining to the sustainability indicators, but also supplies annual series relating to other interesting aspects relating to the sustainability indicators. Background information mentioned in the the indicator report is extended in order to increase the informational value and the transparency of the sustainability indicators.

In addition to (1) with the definition of the respective indicator, these pages contain (2) the data series pertaining to the indicator (in bold print) and the data series of the other curves shown in the charts. In some cases, the data series are given from which an indicator is derived mathematically. Item supplementary data (3) offers important additional information which may be useful for interpreting the indicator data and in most instances is mentioned in the texts. Sometimes further sources of information are listet apard from the data sources.

I. Intergeneration equity
Resource protection

1a Energy productivity

1. Definition

Energy productivity = gross domestic product / domestic primary energy consumption.

Energy productivity expresses how much gross domestic product (in euros, adjusted for price) is obtained per unit of primary energy used (in petajoules). Primary energy includes the primary energy sources obtained domestically and all imported energy sources minus those exported. This does not include offshore bunkering. From a use point of view this is equivalent to the energy employed for energetic purposes and for non-energetic use; to this can be added the conversion losses arising from the domestic conversion of energy and the statistical differences set out in the energy balance sheets.

I. Intergeneration equity
 Resource protection

1b Raw material productivity

1. Definition

Raw material productivity = gross domestic product / domestic abiotic primary materials.

Raw material productivity expresses how much gross domestic product (in euros, adjusted for price) is obtained per tonne of abiotic primary material used.

The (non-renewable) raw materials withdrawn from the domestic environment – not counting agricultural and forestry products – as well as imported abiotic materials (raw materials, semi-finished and finished products) are considered to be abiotic primary material.

Climate protection

2 Greenhouse gas emissions

1. Definition

Emissions of the following greenhouse gases (substances or substance classes) according to the Kyoto Protocol: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), partly halogenated hydrofluorocarbons (H-FKW/HFC), perfluorocarbons (FKW/PFC) and sulphur hexafluoride (SF₆). The base year is 1990 for CO₂, CH₄, N₂O und 1995 for HFC, PFC, SF₆. Calculations are based on the database Zentrales System Emissionen (Central System of Emissions - ZSE) of the Federal Environment Agency taking additional statistical energy information into account.

2. Data on the time series of the indicator

I. Intergeneration equity
Renewable energies

3a, b Share of renewable energy sources in energy consumption

1. Definition

Share of renewable energy sources in total primary energy consumption (3a) and share of renewable energy sources in electricity consumption (3b). Renewable energies include, among others, hydropower, wind power, photovoltaics, solar energy and geothermal energy as well as biomass, such as wood and the biodegradable portions of domestic refuse.

I. Intergeneration equity

Land use

4 Increase in land use for housing and transport

1. Definition

Average daily increase in land use for housing and transport. Determination by the division of the increase in land use for housing and transport (in hectares) in a defined period of time (one year or four years) by the number of days (365/366 or 1461). The moving four-year average is determined in each case by the development of land use for housing and transport in the relevant year and the preceding three years. The data for one year are currently influenced by external effects (the public land survey registers are being reorganised), so that the moving four-year average given a better picture.

I. Intergeneration equity
Species diversity

5 Species diversity and landscape quality

1. Definition

With reference to the projected target value of 100 that is to be reached by 2015, the indicator shows the state of development as an index (percentage of target value). The index is calculated from the level of target achievement, laid down for a total of 59 bird species for target year. The bird species on which the indicator is based represent the most important types of landscape and habitat in Germany (farmland, forests, settlements, inland waters, coasts and seas and the Alps). The size of the bird population reflects the suitability of the landscape as a habitat for the bird species chosen. This indicator also indirectly reflects the development of a number of other species in the landscape and sustainability of land use, since there are also other species besides birds that rely on a richly structured landscape with intact, sustainably used habitats. The historical values for 1970 and 1975 have been reconstructed. For some bird species in coastal/marine habitats, inland waters and in the Alps, values have been extrapolated in individual years.

I. Intergeneration equity
National debt

6 National deficit

1. Definition

National deficit (or financing balance), calculated from national revenue minus national expenditure (by the Federal Government, the *Länder*, municipalities and social security) itemised under national accounts as a percentage of the gross domestic product. Proceeds from the UMTS auctions are not included.

 Provision for future economic stability

7 Gross fixed capital formation in relation to GDP

1. Definition

Gross fixed capital formation (in relevant prices) in relation to the gross domestic product (GDP), also referred to as investment ratio. This includes investments in buildings (residential buildings, non-residential buildings), equipment (machinery, vehicles, tools) and other assets (intangible assets, such as software and copyrights, property transfer costs, production livestock).

I. Intergeneration equity
Education and training

9a 18- to 24-year-olds without school leaving certificate

1. Definition

Share of 18- to 24-year-olds (of all 18- to 24-year-olds) who currently do not attend any school or institution of higher education and are not in training and hold no qualifications from post-16 education or from the dual system of vocational training. Graduates of *Sekundarstufe I* (level 2 of the International Standard Classification of Education) who subsequently did not complete vocational training or did not qualify for university entrance or are no longer involved in the process of education are included. This incorporates those with and without a leaving certificate from a *Hauptschule* (the lowest of the three-tiered German secondary school system).

1) Share of 25-year-old university graduates, according to (ISCED 5A), excluding universities of applied administrative sciences.

2) Share of 25- to 34-year-old university graduates, according to (ISCED 5A/6), excluding universities of applied administrative sciences.

2) Share of 30- to 34-year-old university graduates, according to (ISCED 5A/6), excluding universities of applied administrative sciences.

4) Examinations for diploma and appropriate examinations; since academic year 2007 university degree (without teaching examinations) excluding bachelor and master degrees.

5) Examinations for teaching degree, for a doctorate, other degrees, degree of arts, degree from advanced technical college ("Fachhochschule"); since academic year 2007 bachelor's and master's degrees from examinations for arts or and from examinations.

I. Intergeneration equity
Education and training

9c Share of students starting a degree course

1. Definition

Number of first-semester students (from Germany and abroad, excluding universities of applied administrative sciences) expressed as a percentage of the population of the appropriate university-entrance age. The indicator shows how high the proportion of a demographic age group is that takes up studies at an institution of higher education. The quota is calculated according to the OECD standard in order to allow an international comparison.

1) Preliminary results.

2) Calculated according to OECD-methodology (ISCED 5A); expressed as a percentage of the population of the appropriate university-entrance age; involved are German and foreign students starting a degree course, referring to the academic year starting in autumn; excluding universities of applied administrative sciences.

3) Calculated according to national classification, expressed as a percentage of the population of the appropriate university-entrance age; involved are German and foreign students starting a degree course, referring to the academic year starting in spring; universities of applied administrative sciences are included.

4) Calculation as to kind of higher education entrance qualification is given not until academic year of 1997.

11a Intensity of goods transport

1. Definition

Intensity of goods transport = domestic goods transport performance (in tonne kilometres) / gross domestic product (price-adjusted).

The term transport covers any conveyance of items and all supplementary domestic services (including air transport). In addition to the freight transport performance, energy efficiency is considered (absolute energy consumption and energy consumption per tonne kilometre).

2. Data on the time series of the indicator

11b Intensity of passenger transport

1. Definition

Intensity of passenger transport = passenger transport performance (in passenger kilometres) / gross domestic product (price-adjusted).

The term transport covers any conveyance of persons and all supplementary domestic services (including air transport). In addition to the passenger transport performance, energy efficiency is considered (absolute energy consumption and energy consumption per passenger kilometre).

Farming

12a Nitrogen surplus

1. Definition

Nitrogen surplus in kilogram per hectare of land used agriculture, calculated from nitrogen input (from fertilisers, atmospheric deposition, biological nitrogen fixation, seed and plant material, feedstuff from domestic production and from imports) minus nitrogen output (through crop and animal market products leaving the agricultural sector). The overall balance is calculated on the basis of the "farm-gate model"; nitrogen flows in the domestic cycle – with the exception of domestic feed production – are not shown.

The moving three-year average is calculated from the total balance of the given year, the previous year and the following year.

12b Organic farming

1. Definition

Farmland of organic farms subject to the control procedure of the EC Regulation on Organic Farming (EC Regulation No. 834/2007 and Code of Practice), as a proportion of all the farmland in Germany. It includes both the areas completely devoted to organic farming as well as those still under conversion.

II. Quality of life
Health and nutrition

14a, b Premature mortality

1. Definition

Cases of death in the male (14a) and female (14b) under-65 population in relation to 100,000 residents of the standardised population (from 1987) under 65 years, including those younger than one year. The calculation takes into account that through demographic development in Germany there are increasingly greater numbers of people older than 65 and provides a comparable time series over the years.

2. Data on the time series of the indicator

14e Proportion of obese people

1. Definition

Proportion of obese adults (18 years and older), who have answered the questions on body weight and height and have a BMI (body mass index) of 30 and above, in the population of the same age. The BMI is calculated from the ratio between body weight in kilograms and height in metres squared. People with a BMI of 30+ are classified as obese according to the classification of the World Health Organisation (WHO). Age and gender are not taken into consideration.

2. Data on the time series of the indicator

III. Social cohesion
Employment

16a, b Employment rate

1. Definition

Share of the persons employed between 15 and 64 years (16a) and 55 and 64 years (16b) in the total population of the respective age group. The EU Labour Force Survey covers the population living in private households, but excludes persons in shared housing. The working population consists of people who, during the week under survey engaged in some kind of activity for a least one hour for which they received compensation or who did not work because they were absent from their workplace temporarily.

IV. International responsibility
Development cooperation

20 Share of expenditure for official development assistance in gross national income

1. Definition

Share of the expenditures for official development assistance (ODA) in gross national income.

ODA mainly includes expenditure for the financial and technical cooperation with developing countries as well as contributions to multilateral institutions for development cooperation (such as the United Nations, European Union, World Bank, regional development banks). Furthermore, waivers of debt as well as costs of specific development assistance provided in the donor country, such as cost of studies for students from developing countries or expenditure for development-specific research are attributable to ODA. The data are taken from the yearly report to the Development Assistance Committee of the OECD.

21 German imports from developing countries

1. Definition

Value of the imports from developing countries into Germany excluding imports from the so-called advanced developing countries, but including the European developing countries, such as Albania, Belarus or Turkey. The classification of developing countries is based on the DAC list of Aid Recipients prepared by the Development Assistance Committee of the OECD.
