## Preliminary note

This publication "Data to the Indicator Report 2012" is a supplement to the Indicator Report 2012 on sustainable development in Germany. It provides not only the annual series pertaining to the sustainability indicators, but also supplies annual series relating to other interesting aspects relating to the sustainability indicators. Background information mentioned in the indicator report is extended in order to increase the informational value and the transparency of the sustainability indicators.

In addition to (1) with the definition of the respective indicator, these pages contain (2) the data series pertaining to the indicator (in bold print) and the data series of the other curves shown in the charts. In some cases, the data series are given from which an indicator is derived mathematically. Item supplementary data (3) offers important additional information which may be useful for interpreting the indicator data and in the most instances is mentioned in the texts. Sometimes further sources of information are listed apart from the data sources.

I. Intergenerational equity  
Resource conservation

## 1a, b Energy productivity, Primary energy consumption

### 1. Definition

1a: Energy productivity = gross domestic product / domestic primary energy consumption.

Primary productivity expresses how much gross domestic product (in euros adjusted for price changes) is generated per unit of primary energy used (in petajoules).

b: Domestic primary energy consumption is calculated from the sum of all primary energy sources generated domestically and all imported energy sources less energy exports (and excluding offshore bunkering). In terms of use, this is equivalent to total energy used for energy purposes (final energy consumption and own consumption by energy sectors) and for non-energy purposes (e. g. in the chemical industry), losses incurred through domestic energy conversion, losses from flaring and distribution as well as statistical differences reported in energy balance sheets.

## 1c Raw material productivity

### 1. Definition

Raw material productivity = gross domestic product / domestic abiotic primary material.

Raw material productivity expresses how much gross domestic product (in euros, adjusted for price changes) is obtained per tonne of abiotic primary material used. The (non-renewable) raw materials withdrawn from the domestic environment - not counting agricultural and forestry products - as well as all imported abiotic materials (raw materials, semi-finished and finished products) are considered to be abiotic primary material.

## 2 Greenhouse gas emissions

### 1. Definition

Emissions of the following greenhouse gases<sup>1)</sup> (substances or substances classes) according to the Kyoto Protocol: carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), partly halogenated hydrofluorocarbons (HFC), perfluorocarbons (PFC) and sulphur hexafluoride (SF<sub>6</sub>). The base year is 1990 for CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O and 1995 for HFC, PFC, SF<sub>6</sub>.

Calculations are based on the database Zentrales System Emissionen (Central System of Emissions - ZSE) of the Federal Environment Agency taking additional statistical energy information into account.

I. Intergenerational equity  
 Renewable energy sources

**3a Share of renewable energy sources in final energy consumption**

**b Share of renewable energy sources in electricity consumption**

**1. Definition**

3a: Share of renewable energies in total final energy consumption. Renewable energies include, among other, hydropower, wind power, photovoltaics, solar energy and geothermal energy, as well as biomass and biodegradable portions of domestic refuse. Final energy is generated subject to energy losses through conversion from primary energy (see Indicator 1b) and is directly available to the consumer.

b: Share of electricity from renewable energy sources (see Indicator 3a) in (gross-) electricity consumption (comprising net electricity supply of the country, exchange balance with other countries, own electricity consumption of power plants and grid losses).

**2. Data on the time series of the indicator**

## 4 Build-up area and transport infrastructure expansion

### 1. Definition

Average daily build-up area and transport infrastructure expansion. Determination by the division of the build-up area and transport infrastructure expansion (in hectares) in a defined period of time (one year or four years) by the number of days (365/366 or 1,461). The moving four-year average is determined in each case by the development of this area in the relevant year and the preceding three years.

The data for one year are currently influenced by external effects (the public land survey registers are being reorganised), so that the moving four-year average gives a better picture.

I. Intergenerational equity  
**Species diversity**

## 5 Species diversity and landscape quality

### 1. Definition

With reference to the projected target value of 100 that is to be reached by 2015, the indicator shows the state of development as an index (percentage of target value). The index is calculated from the level of target achievement, laid down for a total 59 bird species for target year.

The bird species on which the indicator is based represent the most important types of landscape and habitat in Germany (farmland, forests, settlements, inland waters, coasts and seas and the Alps). The size of the bird population reflects the suitability of the landscape as a habitat for the bird species chosen. The indicator also indirectly reflects the development of a number of other species in the landscape and sustainability of land use, since there are also other species besides birds that rely on a richly structured landscape with intact, sustainably used habitats.

The historical values for 1970 and 1975 have been reconstructed. For some bird species in coastal/marine habitats, inland waters and in the Alps, values have been extrapolated in individual years.

I. Intergenerational equity  
 Government debt

## 6a, b General government deficit and Structural deficit

### 1. Definition

6a: Annual national deficit (or national financing balance), calculated from national revenue less national expenditure (by the Federal Government, *the Länder*, municipalities and social security funds), itemised under national accounts as a percentage of the nominal gross domestic product. Proceeds from UMTS auctions in the year 2000 are not included.

6b: Annual structural deficit as a percentage of gross domestic product. This is the part of the annual national deficit which cannot be attributed to economic fluctuations and temporary effects. The principle of the structurally balanced budget (debt brake) is laid down in German Basic Law (*Grundgesetz*) (Articles 1009 and 115) and relates to the European Stability and Growth Pact.

Provision for future economic stability

## 7 Gross fixed capital formation in relation to GDP

### 1. Definition

Gross fixed capital formation (at current prices) in relation to the nominal gross domestic product (GDP), also referred to as investment ratio.  
This includes investments in buildings (residential buildings, non-residential buildings), equipment (machinery, vehicles, tools) and other assets (intangible assets, such as software and copyrights, property transfer costs, production livestock).

I. Intergenerational equity  
 Education and training

## 9a 18- to 24-year-olds without a school leaving certificate

### 1. Definition

Share of 18- to 24-year-olds (of all 18- to 24-year-olds) who currently do not attend any school or institution of higher education and are not in training and hold no qualifications from post-16 education or from the dual system of vocational training. Graduates of *Sekundarstufe I* (level 2 of the International Standard Classification of Education) who subsequently did not complete vocational training or did not qualify for university entrance or are no longer involved in the process of education are included. This incorporates those with and without a leaving certificate from a *Hauptschule* (the lowest of the three-tiered German secondary school system).

### 2. Data on the time series of the indicator

**Education and training**

## 9b 30- to 34-year-olds with a tertiary or post-secondary non-tertiary level of education

### 1. Definition

Share of 30- to 34-year-olds (of all 30- to 34-year-olds) who have a university or college education (tertiary education according to International Standard Classification of Education (ISCED) Levels 5 and 6) or a comparable certificate (ISCED 4). Included among tertiary certificates are those attained from universities and universities of applied sciences (ISCED 5A/6) as well as from universities of applied administrative sciences, vocational and specialist academies, technical colleges and health care colleges (ISCED 5B). The indicator includes post-secondary non-tertiary certificates (ISCED 4). These are characterised by the fact that two certificates from post-16 education or from the dual system of vocational training can be acquired consecutively or simultaneously, e. g. *Abitur* (A-Level equivalent) from a night school, college or vocational/technical schools (this presupposes that a vocational certificate has already been attained) or a teacher training certificate following *Abitur* or two consecutive vocational training certificates.

1) Results of Microcensus. - 2) Share of 25- to 34-year-old university graduates, according to (ISCED 5A/6); excluding universities of applied administrative sciences. - 3) Examinations for diploma and appropriate examinations, since academic year 2007 university degree (without teaching examinations) excluding bachelor and master degrees. - 4) Examinations for teaching degree, for a doctorate, other degrees, degree of arts, degree from advanced technical college ("Fachhochschule"); since academic year bachelor and master degrees from examination for arts or from examinations.

Note on footnotes 3 and 4:

As of winter semester 2007/2008, the classification of examinations of higher education statistics was completely revised. In this context, the groups of examinations "Bachelor's degree" and "Master's degree" were deleted and the final examinations contained in them were allocated to other groups of examinations, e. g. "Bachelor's degree (U)" from "Bachelor's degree" to "University degree (without teaching examinations)".

I. Intergenerational equity  
**Education and training**

## 9c Share of students starting a degree course

### 1. Definition

Number of first-semester students (from Germany and abroad, enrolled at institutions of higher education, excluding universities of applied administrative sciences) expressed as a percentage of the population of the appropriate university-entrance age.

The indicator shows how high the proportion of a demographic age group is that takes up studies at an institution of higher education. The quota is calculated according to the OECD standard in order to allow an international comparison.

Of which education entrance qualification from abroad.....														

1) Preliminary results.

2) Calculated according to OECD-methodology (ISCED 5A); expressed as a percentage of the population of the appropriate university-entrance age; involved are German and foreign students starting a degree course, referring to the academic year starting in autumn; excluding universities of applied administrative sciences.

3) Calculated according to national classification, expressed as a percentage of the population of the appropriate university-entrance age; involved are German and foreign students starting a degree course, referring to the academic year starting in spring; universities of applied administrative sciences are included.

4) Calculation as to kind of higher education entrance qualification is given not until academic year of 1997.

## 11a Intensity of goods transport

### 1. Definition

Intensity of goods transport = domestic goods transport performance (in tonne kilometres) / gross domestic product (price-adjusted).

The term transport covers any conveyance of items and all supplementary domestic services (including air transport). In addition to the freight transport performance, energy efficiency is considered (absolute energy consumption and energy consumption per tonne kilometre).

### 2. Data on the time series of the indicator

II. Quality of life  
 Farming

## 12a Nitrogen surplus

### 1. Definition

Nitrogen surplus in kilogram per hectare of land used for agriculture, calculated from nitrogen input (from fertilisers, atmospheric deposition, biological nitrogen fixation, seed and plant material, feedstuff from domestic production and from imports) minus nitrogen output (through crop and animal market products leaving the agricultural sector).  
 The overall balance is calculated on the basis of the "farm-gate model". Nitrogen flows in the domestic cycle – with the exception of domestic feed production – are not shown.  
 The moving three-year average is calculated from the total balance of the given year, the previous year and the following year.

Farming

## 12b Organic farming

### 1. Definition

Farmland of organic farms subject to the control procedure of the EU regulations on organic farming (EC Regulation No. 834/2007 and the implementing rules), as a proportion of all the land used for agriculture in Germany. It includes both the areas completely devoted to organic farming as well as those still under conversion.

 Air quality

## 13 Air pollution

### 1. Definition

The following substances or substance classes are considered to be air pollutants for the purpose of this indicator: sulphur dioxide ( $\text{SO}_2$ ), nitrogen oxides ( $\text{NO}_x$ ), ammonia ( $\text{NH}_3$ ), non-methane volatile organic compounds (NMVOC).

Unweighted average of the indices of the four air pollutants referred to.

II. Quality of life  
Health and nutrition

## 14a, b Premature mortality

### 1. Definition

Cases of death in the male (14a) and female (14b) under-65 population in relation to 100,000 inhabitants of the standardised population (of 1987) under 65 years, including those younger than one year. The calculation takes into account the fact that through demographic change in Germany there is an ever increasing number of people older than 65 and provides a comparable time series over the years.

## 14e Proportion of adults suffering from obesity

### 1. Definition

Proportion of obese adults (18 years and older), who have answered the questions on body weight and height and have a BMI (body mass index) of 30 and above, in the population of the same age. The BMI is calculated from the ratio of body weight in kilograms to height in metres squared. People with a BMI of 30+ are classified as obese according to the classification of the World Health Organisation (WHO). Age and gender are not taken into consideration.

#### 4. Further information

### III. Social cohesion Employment

## 16a, b Employment rate

### 1. Definition

Share of the persons employed between 15 and 64 years (16a), and 55 and 64 years (16b) in the total population of the respective age group.

The EU Labour Force Survey covers the population living in private households, but excludes persons in shared housing. The working population consists of people who, during the week under survey engaged in some kind of activity for at least one hour for which they received compensation or who did not work because they were absent from their workplace temporarily.

IV. International responsibility  
Development cooperation

## 20 Share of expenditure for official development assistance in gross national income

### 1. Definition

Share of the expenditures for official development assistance (ODA) in gross national income.

ODA mainly includes expenditure for the financial and technical cooperation with developing countries as well as contributions to multilateral institutions for development cooperation (such as the United Nations, European Union, World Bank, regional development banks). Furthermore, waivers of debt as well as costs of specific development assistance provided in the donor countries, such as cost of studies for students from developing countries or expenditure for development-specific research are attributable to ODA.

The data are taken from the yearly report to the Development Assistance Committee of the OECD.

## 21 German imports from developing countries

### 1. Definition

Value of the imports from developing countries into Germany excluding imports from the so-called advanced developing countries, but including the European developing countries, such as Albania, Belarus or Turkey. The classification of developing country is based on the DAC list of Aid Recipients prepared by the Development Assistance Committee of the OECD.

#### 4. Further information

## List of abbreviations

### General

AGEB	Working Group on Energy Balances (Arbeitsgemeinschaft Energiebilanzen)
ACP	Africa, the Caribbean and the Pacific Area
AK VGRdL	National accounts working group of the Länder (Arbeitskreis Volkswirtschaftliche Gesamtrechnungen der Länder)
BfN	Federal Agency for Nature Conservation (Bundesamt für Naturschutz)
BMELV	Federal Ministry of Food, Agriculture and Consumer Protection (Bundesministerium für Ernährung, Landwirtschaft und Verbraucherschutz)
BMI	Body mass index
BMU	Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (Bundesministerium für Umwelt, Naturschutz und Reaktorsicherheit)
BZgA	Federal Centre for Health Education (Bundeszentrale für gesundheitliche Aufklärung)
DAC	Development Assistance Committee
EEC	European Economic Community
EU	European Union
GDP	Gross domestic product
GNI	Gross national income
ISCED	International Standard Classification of Education
ODA	Official Development Assistance
OECD	Organisation for Economic Co-operation and Development
R&D	Research and development
SS	Summer semester
TREMOD	Transport emissions estimation model
UGR	Environmental-economic accounting
UMTS	Universal Mobile Telecommunications System
UNFCCC	United Nations Framework Convention on Climate Change
VGR	National accounts
WHO	World Health Organization
WS	Winter semester
ZES	Central system of Emissions (Zentrales System Emissionen)
ZSW	Centre of Solar Energy and Hydrogen Research Baden-Württemberg (Zentrum für Sonnenenergie- und Wasserstoff-Forschung Baden-Württemberg)

### Measures

CH <sub>4</sub>	Methane	ha	hectare
CO <sub>2</sub>	Carbon dioxide	kg	kilogram
FKW / PFC	Perfluorocarbons	km	kilometre
H-FKW / HFCs	Partly halogenated hydrofluorocarbons	km <sup>2</sup>	square kilometre
NH <sub>3</sub>	Ammonia	m <sup>2</sup>	square metre
NMVOC	Non-methane volatile organic compounds	MJ	megajoules
NO <sub>x</sub>	Nitrogen oxides	pass-km	passenger kilometres
N <sub>2</sub> O	Nitrous oxide	t	tonnes
SF <sub>6</sub>	Sulphur hexafluoride	tkm	Tonne kilometre
SO <sub>2</sub>	Sulphur dioxide		
		bn	billion
		mn	million

### Explanation of symbols

0	=	less than half of 1 in the last digit occupied, but more than zero
–	=	no figures or magnitude zero
...	=	data will be available later
.	=	numerical value unknown or not to be disclosed
x	=	cell blocked for logical reasons
