I. Intergenerational equity		II. Quality of life		III. Social cohesion	
Resource conservation		Economic output		Employment	
1a,b Energy productivity, Primary energy consumption.....	5	10 Gross domestic product per capita.....	30	16a,b Employment rate	50
1c Raw material productivity.....	7	Mobility		Prospect for families	
Climate protection		11a Intensity of goods transport.....	32	17a,b All-day care provision for children	52
2 Greenhouse gas emissions.....	9	11b Intensity of passenger transport.....	34	Equal opportunities	
Renewable energy sources		11c,d Share of rail transport and inland freight water transport	36	18 Gender pay gap	54
3a,b Share of renewable energy sources in final energy consumption, Share of renewable energy sources in electricity consumption.....	11	Farming		Integration	
Land use		12a Nitrogen surplus	37	19 Foreign school leavers with a school leaving certificate	55
4 Built-up area and transport infrastructure expansion....	13	12b Organic farming	39		
Species diversity		Air pollution		IV. International responsibility	
5 Species diversity and landscape quality.....	15	13 Air pollution	41	Development cooperation	
Government debt		Health and nutrition		20 Share of expenditure for official development assistance in gross national income	59
6a,b General government deficit, Structural deficit.....	16	14a,b Premature mortality	42	Opening markets	
6c Government debt.....	18	14c,d Smoking rates amongst young people and adults	44	21 German imports from developing countries	61
Provision for future economic stability		14e Proportion of adults suffering from obesity	46		
7 Gross fixed capital formation in relation to GDP.....	19	Crime		List of abbreviations	63
Innovation		15 Criminal offences	48		
8 Private and public spending on research and development.....	22				
Education and training					
9a 18- to 24-year-olds without a school living certificate...	24				
9b 30- to 34-year-olds with a tertiary or post secondary non-tertiary level of education.....	26				
9c Share of students starting a degree course.....	28				

Preliminary note

This publication "Data to the Indicator Report 2014" is a supplement to the Indicator Report 2014 on sustainable development in Germany. It provides not only the annual series pertaining to the sustainability indicators, but also supplies annual series relating to other interesting aspects relating to the sustainability indicators. Background information mentioned in the indicator report is extended in order to increase the informational value and the transparency of the sustainability indicators.

In addition to (1) with the definition of the respective indicator, these pages contain (2) the data series pertaining to the indicator (in bold print) and the data series of the other curves shown in the charts. In some cases, the data series are given from which an indicator is derived mathematically. Item supplementary data (3) offers important additional information which may be useful for interpreting the indicator data and in the most instances is mentioned in the texts. Sometimes further sources of information are listed apart from the data sources.

I. Intergenerational equity
Resource conservation

1a, b Energy productivity, Primary energy consumption

1. Definition

1a: Energy productivity = gross domestic product / domestic primary energy consumption.

Energy productivity expresses how much gross domestic product (in euros adjusted for price changes) is generated per unit of primary energy used (in petajoules).

b: Domestic primary energy consumption is calculated from the sum of all primary energy sources generated domestically and all imported energy sources less energy exports (and excluding offshore bunkering). In terms of use, this is equivalent to total energy used for energy purposes (final energy consumption and own consumption by energy sectors) and for non-energy purposes (e. g. in the chemical industry), losses incurred through domestic energy conversion, losses from flaring and distribution as well as statistical differences reported in energy balance sheets.

Resource conservation

1c Raw material productivity

1. Definition

Raw material productivity = gross domestic product / domestic abiotic primary material.

Raw material productivity expresses how much gross domestic product (in euros, adjusted for price changes) is obtained per tonne of abiotic primary material used.

The (non-renewable) raw materials withdrawn from the domestic environment – not counting agricultural and forestry products – as well as all imported abiotic materials (raw materials, semi-finished and finished products) are considered to be abiotic primary material.

Climate protection

2 Greenhouse gas emissions

1. Definition

Emissions of the following greenhouse gases (substances or substance groups) compliant with the Kyoto Protocol (excluding emissions from land use changes and forestry [LULUCF] and excluding emissions from the energy utilisation of biomass): carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), partly halogenated hydrofluorocarbons (HFC), perfluorocarbons (PFC) and sulphur hexafluoride (SF₆). The base year is 1990 for CO₂, CH₄, N₂O and 1995 for HFC, PFC, and SF₆. Calculations are based on the database Zentrales System Emissionen (Central System of Emissions – ZSE) of the Federal Environment Agency taking additional statistical energy information into account. Indicators are calculated in accordance with the territorial principle (emissions on German territory, in other words including foreign companies located in Germany and excluding emissions from German companies located abroad).

I. Intergenerational equity
Renewable energy sources

3a Share of renewable energy sources in final energy consumption

b Share of renewable energy sources in electricity consumption

1. Definition

3a: Share of renewable energy sources in total final energy consumption. Renewables include, among others, hydropower, wind power on land and at sea, solar energy and geothermal energy, but also biomass such as biogenic solid fuels, biogas and biogenic wastes. Final energy is generated subject to energy loss through conversion from primary energy (see Indicator 1b) and is directly available to the consumer.

b: Share of electricity from renewable energy sources (see Indicator 3a) in (gross) electricity consumption (comprising net electricity supply of the country, exchange balance with other countries, own electricity consumption of power plants and grid losses).

I. Intergenerational equity

Land use

4 Built-up area and transport infrastructure expansion**1. Definition**

Average daily built-up area and transport infrastructure expansion. Determination by the division of the built-up area and transport infrastructure expansion (in hectares) in a defined period of time one year or four years) by the number of days (365/366 or 1,461). The moving four-year average is determined in each case by the development of this area in the relevant year and the preceding three years. The data for one year is currently influenced by external effects (the public land survey registers are being reorganised), so that the moving four-year average gives a better picture.

2. Data on the time series of the indicator

I. Intergenerational equity

Species diversity

5 Species diversity and landscape quality**1. Definition**

With reference to the projected target value of 100 that is to be reached by 2015, the indicator shows the state of development for 51 selected bird species in the form of an index (measured in % of target value, degree of target achievement). The bird species represent the most important landscape and ecosystem types in Germany (10 species each for the sub-indicators agricultural land, settlements, inland waters, coasts and seas, 11 species for forests; temporarily excluding the Alps due to the unreliable data basis). The stock per species is calculated annually from the results of bird monitoring programmes and related to the size of the defined target value. The results of the spatially representative and statistically reliable monitoring of common breeding species started in 2004 is incorporated in the calculations. More than 1,400 sample areas were recorded in 2011. The historical values for 1970 and 1975 in comparison, have been reconstructed. The indicator is also adopted for the National Strategy on Biological Diversity.

I. Intergenerational equity
Government debt

6a, b General government deficit, Structural deficit

1. Definition

6a: Annual national deficit (or national financing balance), calculated from national revenue less national expenditure (by the Federal Government, *the Länder*, municipalities and social security funds), itemised under national accounts as a percentage of the nominal gross domestic product. Proceeds from UMTS auctions in the year 2000 are not included.

b: Annual structural deficit as a percentage of gross domestic product. This is the part of the annual national deficit which cannot be attributed to economic fluctuations and temporary effects. The principle of the structurally balanced budget (debt brake) is laid down in German Basic Law (*Grundgesetz*) (Articles 109 and 115) and relates to the European Stability and Growth Pact.

 Provision for future economic stability

7 Gross fixed capital formation in relation to GDP

1. Definition

Gross fixed capital formation (at current prices) in relation to the nominal gross domestic product (GDP) also referred to as investment ratio.

This includes investments in buildings (residential buildings, non-residential buildings), equipment (machinery, vehicles, tools) and other assets (intangible assets, such as software and copyrights, property transfer costs, production livestock).

I. Intergenerational equity
Education and training

9a 18- to 24-year-olds without a school leaving certificate

1. Definition

Share of 18- to 24-year olds (of all 18- to 24-year olds) who currently do not attend any school or institution of higher education and are not in training and hold no qualifications from post-16 education or from the dual system of vocational training. Graduates of *Sekundarstufe I* (level 2 of the International Standard Classification of Education) who subsequently did not complete vocational training or did not qualify for university entrance or are no longer involved in the process of education are included. This incorporates those with and without a leaving certificate from a *Hauptschule* (the lowest of the three-tiered German secondary school system). Population data are based on the microcensus.

2. Data on the time series of the indicator

I. Intergenerational equity
Education and training

9b 30- to 34-year-olds with a tertiary or post-secondary non-tertiary level of education

1. Definition

Share of 30- to 34-year-olds (of all 30- to 34-year-olds) who have a university or college education (tertiary education according to International Standard Classification of Education [ISCED] Levels 5 and 6) or a comparable certification (ISCED 4). Included among tertiary certificates are those attained from universities and universities of applied sciences (ISCED 5A/6) as well as from universities of applied administrative sciences, vocational and specialist academies, technical colleges and health care colleges (ISCED 5B). The indicator includes post-secondary non-tertiary certificates (ISCED 4). These are characterised by the fact that two certificates from post-16 education or from the dual system of vocational training can be acquired consecutively or simultaneously, e.g. *Abitur* (A-Level equivalent) from a night school, college or vocational/technical schools (this presupposes that a vocational certificate has already been attained) or a teacher training certificate following *Abitur* or two consecutive vocational training certificates. Population data are based on the microcensus.

1) Results of Microcensus.

2) Share of 25- to 34-year-old university graduates, according to (ISCED 5A/6); excluding universities of applied administrative sciences.

3) Examinations for diploma and appropriate examinations, since academic year 2007 university degree (without teaching examinations) excluding bachelor and master degrees.

4) Examinations for teaching degree, for a doctorate, other degrees, degree of arts, degree from advanced technical college ("Fachhochschule"); since academic year bachelor and master degrees from examination for arts or and from examinations.

5) Since 2011 graduates with a master degree are not accounted for first graduates.

Note on footnotes 3 and 4:

As of winter semester 2007/2008, the classification of examinations of higher education statistics was completely revised. In this context, the groups of examinations "Bachelor's degree" and "Master's degree" were deleted and the final examinations contained in them were allocated to other groups of examinations, e. g. "Bachelor's degree (U)" from "Bachelor's degree" to "University degree (without teaching examinations)".

I. Intergenerational equity
Education and training

9c Share of students starting a degree course

1. Definition

Number of first-semester students (from Germany and abroad, enrolled at institutions of higher education, excluding universities of applied administrative sciences) expressed as a percentage of the population of the appropriate university-entrance age. The indicator shows how high the proportion of a demographic age group is that takes up studies at an institution of higher education. The quota is calculated according to the OECD standard in order to allow an international comparison. Population data are based on the microcensus.

1) Preliminary results.

2) Calculated according to OECD-methodology (ISCED 5A); expressed as a percentage of the population of the appropriate university-entrance age; involved are German and foreign students starting degree course, referring to the academic year starting in autumn; excluding universities of applied administrative sciences.

3) Calculated according to national classification, expressed as a percentage of the population of the appropriate university-entrance age; involved are German and foreign students starting a degree course, referring to the academic year starting in spring; universities of applied administrative sciences are included.

4) Calculation as to kind of higher education entrance qualification is given not until academic year of 1997.

II. Quality of life
Economic output

10 Gross domestic product per capita

1. Definition

Gross domestic product (GDP, price-adjusted, reference year 2005) per capita.

The population data refer to annual average as delineated in the national accounts (currently exclusively based on the 1987 census for the years starting in 1990).

2. Data on the time series of the indicator

11a Intensity of goods transport

1. Definition

Intensity of goods transport = domestic goods transport performance (in tonne-kilometres) / gross domestic product (price-adjusted).

The term transport covers any conveyance of items and all supplementary domestic services (including air transport and local transport of German lorries up to 50 km).

In addition to the freight transport performance, energy efficiency is considered (absolute energy consumption and energy consumption per tonne-kilometre).

2. Data on the time series of the indicator

Farming

12a Nitrogen surplus

1. Definition

Nitrogen surplus in kilogram per hectare land used for agriculture, calculated from nitrogen input (from fertilisers, atmospheric deposition, biological nitrogen fixation, seed and plant material, feedstuff from domestic production and from imports) minus nitrogen output (through crop and animal market products leaving the agricultural sector). The overall balance is calculated on the basis of the "farmer-gate-model". Nitrogen flows in the domestic cycle – with the exception of domestic feed production – are not shown.

The moving three-year average is calculated from the total balance of the given year, the previous year and the following year.

2. Data on the time series of the indicator

1) The moving three-year average was calculated from the total balance in the given year, the previous year and the following year.

2) Data for 1990 partly uncertain, for 2012 partly preliminary.

3) Due to methodological changes, the results are comparable only to a limited degree with data of previous publications. Due to the accuracy indicated in the tables, differences may occur in the subtotals.

II. Quality of life
Farming

12b Organic farming

1. Definition

Farmland used for organic farming subject to the control procedure of the EU regulations on organic farming (EC Regulation No. 834/2007 and provisions concerning its implementation in EC Regulation No. 889/2008), as a proportion of all the farmland in Germany. It includes both the areas completely devoted to organic farming as well as those still under conversion. The results of official statistics are used. For methodological reasons (among other things data collection thresholds, time of survey) they differ slightly from the data provided annually by the Federal Office for Agriculture and Food.

II. Quality of life
Air pollution

13 Air pollution

1. Definition

The following substances or substance classes are considered to be air pollutants for the purpose of this indicator: sulphur dioxide (SO₂), nitrogen oxides (NO_x), ammonia (NH₃), non-methane volatile organic compounds (NMVOC). Unweighted average of the indices of the four air pollutants referred to.

2. Data on the time series of the indicator

II. Quality of life
Health and nutrition

14a,b Premature mortality

1. Definition

Cases of death in the male (14a) and female (14b) under 65-year-old population in relation to 100,000 inhabitants of the standardised population (of 1987) under 65 years, including those younger than one year. The calculation takes account the fact through demographic change in Germany there is an ever increasing number of people older than 65 and provides a comparable time serie over the years.

Health and nutrition

14e Proportion of adults suffering from obesity

1. Definition

Proportion of obese adults (18 years and older), who have answered the questions on body weight and height and have a BMI (body mass index) of 30 and above, in the population of the same age. The BMI is calculated from the ratio of body weight in kilograms to height in metres squared. People with a BMI of 30+ are classified as obese according to the classification of the World Health Organisation (WHO). Age and gender are not taken into consideration.

II. Quality of life
Crime

15 Criminal offences

1. Definition

Number of criminal offences reported each year to the police and recorded in the Police Crime Statistics (Polizeiliche Kriminalstatistik) per 100,000 inhabitants (frequency). The population figure is given by projecting the 2012 population and does not yet incorporate the results of the 2011 census.

III. Social cohesion
Employment

16a, b Employment rate

1. Definition

Share of the persons employed between 15 and 64 years (16a), and 55 and 64 years (16b) in the total population of the respective age group.

The population data are taken from the microcensus, the results of the 2011 census are not yet incorporated. The working population consists of people who, during the week under survey, engaged in some kind of activity for at least one hour for which they received compensation, or did not work because they were absent from their workplace temporarily.

1) As 2005 yearly average and different data collection and projection method.

2) From 2010: Definition of the employment status adjusted to international provisions (modified treatment of persons who are absent from their workplace for more than three months). This slightly affects the comparability over time.

III. Social cohesion
Prospects for families

17a,b All-day care provision for children

1. Definition

Share of children in all-day care (more than seven hours without publicly funded care in private homes) as percentage of all children from the respective age groups:

0- to 2-year-olds (17a) as well as 3- to 5-year-olds (17b). Data of survey: 1 March.

Data on population (by age groups) are based on updating of former census results.

The results of the 2011 census are not yet incorporated.

2. Data on the time series of the indicator

IV. International responsibility
Development cooperation

20 Share of expenditure for official development assistance in gross national income

1. Definition

Share of the expenditure for Official Development Assistance (ODA) in gross national income.

ODA mainly includes expenditure for financial and technical cooperation with developing countries as well as contributions to multilateral institutions for development cooperation (such as the United Nations, European Union, World Bank, regional development banks). Furthermore, waivers of debt as well as costs for specific development assistance provided in the donor country, such as cost of studies for students from developing countries or expenditure for development-specific research are attributable to ODA. The data are taken from the yearly report to the Development Assistance Committee of the OECD.

Opening markets

21 German imports from developing countries

1. Definition

Value of the imports from developing countries into Germany excluding imports from the so-called advanced developing countries, but including the European developing countries, such as Albania, Belarus or Turkey. The classification of developing countries is based on the DAC List of Aid Recipients prepared by the Development Assistance Committee of the OECD.

2. Data on the time series of the indicator

4. Further Information

List of abbreviations

General

ACP	Africa, the Caribbean and the Pacific Area
AGEB	Working Group on Energy Balances (Arbeitsgemeinschaft Energiebilanzen)
AK VGRdL	National accounts working group of the Länder (Arbeitskreis Volkswirtschaftliche Gesamtrechnungen der Länder)
BfN	Federal Agency for Nature Conservation (Bundesamt für Naturschutz)
BMI	Body mass index
BZgA	Federal Centre for Health Education (Bundeszentrale für gesundheitliche Aufklärung)
DAC	Development Assistance Committee
EG	European Communities (Europäische Gemeinschaften)
ESA	European System of Accounts (Europäisches System Volkswirtschaftlicher Gesamtrechnungen [ESVG])
EU	European Union
GDP	Gross domestic product
GNI	Gross national income
ISCED	International Standard Classification of Education
ODA	Official Development Assistance
OECD	Organisation for Economic Co-operation and Development
R&D	Research and Development
SS	Summer semester
TREMOD	Transport emissions estimation model
UGR	Environmental-Economic Accounting (EEA)
UMTS	Universal Mobile Telecommunications System
UNFCCC	United Nations Framework Convention on Climate Change
VGR	National accounts
WHO	World Health Organization
WS	Winter semester
ZES	Central system of Emissions (Zentrales System Emissionen)
ZSW	Centre of solar Energy and Hydrogen Research Baden-Württemberg (Zentrum für Sonnenenergie- und Wasserstoff-Forschung Baden-Württemberg)

CH ₄	Methane
CO ₂	Carbon dioxide
FKW / PFC	Perfluorocarbons
H-FKW / HFCs	Partly halogenated hydrofluorocarbons
NH ₃	Ammonia
NMVOG	Non-methane volatile organic compounds
NO _x	Nitrogen oxides
N ₂ O	Nitrous oxide
SF ₆	Sulphur hexafluoride
SO ₂	Sulphur dioxide

Measures

ha	hectare
kg	kilogram
km	kilometre
km ²	square kilometre
m ²	square metre
MJ	megajoules
tkm	tonne kilometre
bn	billion
mn	million

Explanation of symbols

0	=	less than half of one in the last digit occupied, but more than zero
–	=	no figures or magnitude zero
...	=	data will be available later
.	=	numerical value unknown or not to be disclosed
x	=	cell blocked for logical reasons
